# New ways for Slovakia.

With its broad experience in infrastructural construction, PORR s.r.o. is mainly responsible for three bridges of the following lengths: 511m, 477m and 370m. The longer ones are being constructed with the help of mobile scaffolding systems. For the shorter one a solid support structure is being used. By using the mobile scaffolding system, we made the whole process safer, more efficient and last but not least also less costly.

The newly built part of the D3 motorway in the region of Čadca is supposed to be completed and opened for traffic by the end of 2020.

## Impressions

## Image notes

1

New traffic management.

The new 5.6km-long section of the new D3 motorway is expected to have a positive impact on the traffic situation in the north of Slovakia.

2

Suspension bridge in construction.

For the construction of three new bridges, the National Motorway Company NDS relies on PORR s.r.o.'s civil engineering expertise.

3

Construction work for calming traffic.

More than 18,000 vehicles are passing the D3 on a daily basis. The new motorway will let the traffic volume bypass the town of Čadca.
