Traditional building given an entirely new face.

The construction site had all difficulties of inner-city construction, such as extremely restricted spatial conditions for delivery and material storage or the use of a crane, in store. Despite this, carcass work could be completed on schedule. To secure the adjacent buildings, the public traffic areas and the access roads and storage areas, a contiguous CFA pile wall was installed and reinforced by means of ring-shaped in-situ concrete cover constructions supported by auxiliary piles. Due to aquiferous subsoil layers as well as the Alserbach River which runs below Lazarettgasse, the up-to-1.2-m-thick foundation plate as well as the basement's exterior walls were executed in accordance with the regulations of white tubs.

Impressions

Image notes

1

Wiener Privatklinik (Vienna Private Hospital).

Wiener Privatklinik (Vienna Private Hospital) newly constructed by PORR features five upper and three basement floors.
